In the Claims:

Please add new claims as follows:

11. The method of claim 1 which includes radio-exchanging seed data between the carrier facility and the wireless communications device, and generating a pseudo random sequence based on said key data at both the carrier facility and the wireless communications device, said pseudo-random sequence being used in said device to alter the user's voice data to steganographically embed the verification data therein, and being used at said facility to detect said verification data therefrom.

12. The method of claim 11 which includes storing, in the wireless communications device, a binary key sequence, wherein the seed data is a subset of said binary key sequence.

13. The method of claim 12 which includes randomly selecting bits from said binary key sequence to comprise said seed data.
